Enterina Programming Mode

Using the Hood Pin	Using the Antenna Programming Assistance Button (A.P.A.B.) (Optional)
 Press and hold the hood pin for 4 seconds. 	Make sure the hood is closed.
Release the hood pin. The parking lights will turn ON.	Turn the ignition key to the IGNITION ON (RUN) position.
While the parking lights are ON, press the hood pin once more and release immediately. The parking lights will turn ON and stay ON for 20 seconds.	Within 5 seconds, press the programming button on the antenna twice for 1 second each time. The LED will come ON solid.
You now have 20 seconds to select one of the sub-menus.	You now have 20 seconds to select one of the submenus.
Note: To exit programming mode, close the hood.	Note: To exit programming mode, press on the antenna button once (the LED will come ON) and release.

Manual or Automatic Transmission

This module may be installed on vehicles with manual or automatic transmissions. It is originally configured for manual transmissions. If the vehicle you are working on is automatic, it is mandatory to make a few quick and easy modifications before the unit is connected. In the event that the configuration requires changes afterwards, a complete reset will be necessary before those changes become effective.

To install this unit in a vehicle with a manual transmission:

- Make sure the Yellow loop on the PC board is connected.
- Connect the **Orange** handbrake wire located on the 12-pin harness to the vehicle handbrake switch.
- Connect the Blue/White (+) door input OR the Grey (-) door input wire located on the 12-pin harness to the vehicle door pin wire, which monitors all the doors of the vehicle (only use 1 of the 2 door trigger inputs).
- Make sure the Purple TACH wire is plugged in the TACH wire MUST be hooked up when the module is set for a manual transmission.
- Make all your regular connections.

The manufacturer will accept no responsibility for any electrical damage resulting from improper installation of the product, be that either damage to the vehicle itself or to the unit. This unit must be installed by a certified technician using all safety devices supplied. Please note that this guide has been written for properly trained Autostart technicians: a certain level of skills and knowledge is therefore assumed. Please review the installation guide carefully before beginning any work.

Before installing the unit, if installing on a vehicle with a manual transmission, test that the OEM Door Switch contacts of the vehicle work well, and that the Parking Brake system operates properly. If installing on a vehicle with an automatic transmission, test that the vehicle does not start when the gearshift lever is in the "Drive" position. If it starts in gear, install a manual-transmission remote starter system instead.

DOC. 1.00	- AS-1/5/ -	October 7, 2008 -	- MO -	Assembled in Canada	

- Power up the unit by first inserting the 5-pin connector, then the 6-pin connector and finally the 12-pin connector. The
 parking lights will flash 4 times.
- When learning the transmitter, the parking lights will flash 5 times quickly.
- Upon the first successful remote start, the system will lock the transmission settings to manual mode.

To install this unit in a vehicle with an automatic transmission:

- Cut the loop on the pc board (Yellow wire).
- 2. Make sure the **Orange** handbrake wire is not connected to any of the vehicle circuits.
- Make all the regular connections.
- 4. Power up the unit. The parking lights will flash 4 times.
- 5. When learning the first transmitter, the parking lights will flash 5 times quickly then give 2 slow flashes.
- Upon the first successful remote start once the yellow loop has been cut, the system will lock the transmission settings to automatic mode.

Note: If upon pressing the **START** button, the parking lights give **3 slow flashes**, make sure that the **Orange** handbrake wire is not connected and that the yellow loop is cut and isolated.

Resetting the Module

WARNING!	By resetting the module, all programmed values are erased — i.e.: tach, transmitter as well as
	programming options. The programming options are returned to their default values.

- Flash the hood pin (see p. 1).
- Once having reached the programming mode, quickly press and release the brake pedal until the parking lights flash 8

Transmitter Programming Procedure

- 1. Flash the hood pin (see p. 1) the parking lights will stay on for up to 20 seconds.
- 2. Before the lights go out, turn the ignition key to the IGNITION ON (RUN) position and immediately to the OFF position.
- Press and hold the LOCK button and keep it down until the siren or horn chirps twice and the parking lights flash 5 times quickly.
- 4. The transmitter has been stored in memory.
- 5. To exit: close the hood. Note: Each unit can store 4 remotes in its memory.

To program a transmitter on the second vehicle for multi-car operation, you must press the TRUNK button (instead of LOCK or UNLOCK) in step 3 of the transmitter programming procedure.

Enterina Programming Options

- 1. Flash the hood pin switch (see p. 1) the parking lights will stay on for up to 20 seconds.
- 2. Before the lights go out, press and hold the brake pedal and then press one of the following buttons:

- The parking lights will flash and the horn or siren will chirp (if programmed) once, twice, three or four times to confirm entry into a mode.
- Release the brake pedal.

Once the desired mode has been selected, the unit will fall (by default) into function #1 of that mode; you can now select the option you want in function 1. Once this option has been chosen, the unit will move on to function 2 of the mode selected, and so on

LOCKfor Option 1;	TRUNK for Option 3;
UNLOCKfor Option 2:	START/STOP for Option 4.

Programming Options

MODE 1 *INDICATES D	EFAULT SETTING
FUNCTION 1 – Ignition	-controlled door locks
OPTION 1*	Ignition lock DISABLED
OPTION 2	Ignition lock ENABLED
OPTION 3	Ignition unlock only

OPTION 2	4-sec. lock/unlock pulses
OPTION 3	7/10-sec. lock pulse and two ¼ -sec. unlock pulses
OPTION 4	1/10-sec. lock/unlock pulses

P. 2 http://www.autostart.ca Installation Guide

Cautio

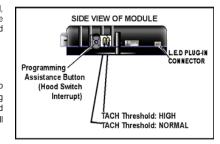

Only one set of pins can be used at one time. Using more than one jumper may result in serious damage to the vehicle. The relay output rating on this unit is 25a at most. Defective oem solenoid switches can sometimes draw up to 50 or 60a, causing the 30a fuse to blow. Always verify your circuit with an appropriate measuring device.

Tach jumper settings

Some new vehicles have a higher TACH voltage threshold, which would fall out of the normal TACH trigger circuit of the remote car starter. Changing the jumper to TACH Threshold HIGH will allow the module to properly detect the TACH signal.

Testing

Before putting back the vehicle together, it is recommended to check that the system operates properly. The following testing procedures should be used to verify proper installation and operation of the system. Before testing, make sure that all connections are soldered and that the unit is plugged in.

If installed on a MANUAL transmission, make sure the system properly enters and exits ready mode: Ready mode is a sequence of steps that must be followed in order to allow manual transmission vehicles to be remote started. To get into ready mode:

If Ready Mode is enabled by remote

If Ready Mode is enabled by handbrake

With the engine already running, apply the

Make sure to release the brake pedal.

and remain lit. Skip to step 4.

parking brake twice and release the brake pedal.

The parking lights will flash 3 times quickly

- Ensure that all the doors, hood and trunk are closed. Make sure that the gear selector is in the neutral position.
- With the engine already running, apply the parking brake once and release the brake pedal.

 Make sure to release the brake pedal.
 - Within 20 sec. of engaging the parking brake, press and hold LOCK, UNLOCK or START/STOP on the transmitter

The parking lights will flash 3 times quickly and remain lit.

- Remove the key: the engine will continue running.
- 4. Exit the vehicle and close all doors, hood and trunk.
- Press for approx. 1 second either:
 - LOCK to lock the doors and shut down the engine;
 - UNLOCK to unlock the doors and shut down the engine;
 - START/STOP to shut down the engine without affecting the doors.

The system will exit ready mode if a door, the hood or the frunk is opened, if the brake pedal is pressed, if the parking brake is disengaged or if the ignition key is turned to the Ignition On (Run) position.

3 3 3 3 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7
Remote-start the engine and listen for starter drag. If the starter cranks for too long, carry out another tac programming procedure.
Hood switch shutdown. With the vehicle running under the remote car starter, open the hood; the vehicle should shudown. If it does not shut down, check the hood pin-switch and its connector.
Brakes shutdown circuit. With the vehicle running under the remote car starter, press and release the brake pedal. The engine should shut down immediately. If it continues to run, check the brakes switch connection.
Parking brake shutdown circuit. With the vehicle running under remote start, disengage the parking brake. The engin should shut down immediately. If the engine continues to run, check the parking brake switch connection.
OEM alarm control. Make sure the module is able to arm and disarm the oem alarm (if applicable).
Door locks and trunk testing. Make sure each of these options respond to the transmitter (if installed).
Door pin shutdown circuit. Make sure the system exits ready mode when each door is opened. (Test each door.)
Starter kill option. Sit inside the vehicle with all doors closed. Arm the vehicle, then try to start the engine with the key

Installation Guide http://www.autostart.ca/ P. 7

The engine should not start. If the engine starts, rewire the starter kill to reach proper operation.

Ī	FUNCYION 3 - Bypass	
	OPTION 1	ADS
	OPTION 2*	Trilogix
	OPTION 3	Fortin
	FUNCTION 4 – Bypass Typ	e
	OPTION 1	One-Way communication
	OPTION 2*	Two-Way communication (For Trilogix bypass only)

Virtual Tach System

* Virtual Tach System combines the latest microcontroller technology and a complex algorithm that took years to develop. VTS is able to effectively monitor the engine starting sequence and release the starter at the right time without physically connecting the tach wire to the remote starter. The VTS constantly monitors the data and readjusts itself automatically in order to maximize its capability to start the engine properly in any weather or deteriorating battery condition (automatic transmission only).

Optional Time Delay Adjustment in Virtual Tach System

Follow these steps to program crank time adjustment, if needed:

- 1. Flash the hood pin (see p. 1) the parking lights will stay on for up to 20 seconds.
- 2. Before the lights go out, press and hold the brake pedal and press the LOCK and UNLOCK buttons simultaneously the parking lights will flash 4 times. Do not release the brake pedal.
- Press the LOCK button if you wish to increase the time delay or the UNLOCK button if you want to decrease it. The time delay will be increased or decreased by 50ms, and the parking lights will flash once every time the LOCK or UNLOCK button is pressed.
- 4. Press the **TRUNK** button to save the settings you have entered.
- 5. Release the brake pedal the time delay programming is now complete.

Multi-speed Tach Programming

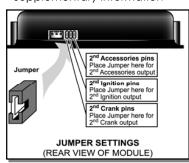

- 1. Flash the hood pin (see p. 1) the parking lights will stay on for up to 20 seconds.
- 2. Before the lights go out, press and hold the brake pedal and press the LOCK and UNLOCK buttons simultaneously the parking lights will flash 4 times, then the siren or horn will chirp 4 times. At that point, release the brake pedal.
- Start up the engine and allow the vehicle to reach regular engine idle speed.
- 4. Once the engine is running at normal idle speed, press the brake pedal and keep it down until you hear the parking lights output click 5 times; the siren will chirp twice.
- 5. Release the brake pedal —the tach programming is now complete.

Horn Honk Timing

Follow these steps to program horn confirmation:

- 1. Ensure that the hood is up and that the ignition is off.
- 1. Hold the hood pin down for 4 seconds.
- 2. Release the hood pin. The parking lights will come on.
- 3. While the parking lights are on, immediately push and release the hood pin again. The parking lights will stay on for up to 20 seconds.
- Press and hold the brake pedal, then simultaneously press **UNLOCK** and **START/STOP** buttons the horn will chirp 5 times.
- Release the brake pedal.
- 4. To change the timing:
 - a. To increase the Horn pulse by 3 ms, press the LOCK button.
 - b. To decrease the pulse by 3 ms, press the **UNLOCK** button.
 - c. To increase the pulse by 10 ms, press the START/ STOP button.
 - d. To decrease the pulse by 10 ms, press the **TRUNK** button.
- 5. To save the new settings; press LOCK and UNLOCK. If 3 chirps are returned, the new settings have been saved.

Supplementary Information

Fifth Relay Output (2nd IGN, ACC or CRANK)

Remote car starters of this series are equipped with an on-board high-current programmable 5th relay that can be used to power a second ignition, accessory or crank wire. The unit uses 3 sets of pins; each set corresponds to a specific function of the output. In order to activate one of the three possible functions, you must place the jumper (supplied) on one of the three sets of pins and connect the 14 AWG wire to the second IGN. / ACC. / CRANK wire of the vehicle.
